PROJECTS

Campus Navigation System

- Implemented Dijkstra's Algorithm in Java to determine the most efficient routes between various campus locations.
- Developed a responsive frontend using HTML, CSS, and JavaScript to enhance user engagement.
- Created a custom campus mapping system based on the actual coordinates of buildings.
- Designed backend request handling with Java Servlets to facilitate efficient route computation and map rendering.

Crime Hotspot Detection & Safe Route Advisor

- Developed a Streamlit-based web application to analyze crime data and suggest safer travel routes.
- Integrated the OpenRouteService API for route generation across different districts.
- Processed large CSV crime datasets using Python to pinpoint high-risk areas.

Created interactive maps that highlight hotspots and provide safety scores for recommended routes.
